Windows on Microsoft

Windows Vista Overview for IT Professionals

Windows Vista advancements in security and reliability, along with its cost and operational efficiencies, give you and your users confidence in your company PCs. With Windows Vista, users have clear ways to organize and view their information, which enables them to focus on the most important aspect of their jobs.

Windows Vista communication, mobility, and networking features keep users connected to people, information, and devices. Combined, these benefits bring clarity to your world and to the world of your end users. These capabilities make Windows Vista a great operating system solution for your company PCs. From the perspective of an IT professional, Windows Vista is easier to deploy, and less expensive to maintain, than any earlier version of Windows. From the perspective of end users, Windows Vista's improved performance and reliability add value by allowing people to be more effective while performing their jobs.

Security

With Windows Vista, Microsoft is making fundamental investments in technology to help make customers more secure. Windows Vista includes many security features and improvements to protect client computers from the latest generation of threats, including spyware and other types of malware.

Windows Firewall with Advanced Security and Windows Service Hardening

In Windows Vista, Internet Protocol security (IPsec) and firewall management are integrated in a single console, known as Windows Firewall with Advanced Security. This console centralizes inbound and outbound traffic filtering along with IPsec server and domain isolation settings in the user interface, enabling increased visibility into security settings.

Multi-Tiered Data Protection

Theft or loss of corporate intellectual property is an increasing concern for organizations. Windows Vista has improved support for data protection at the document, file, directory, and machine levels. The integrated Rights Management client allows organizations to enforce policies around document usage. The Encrypting File System, which provides user-based file and directory encryption, has been enhanced to allow storage of encryption keys on smart cards, providing better protection of encryption keys.

Reliability and Performance

While Windows Vista takes advantage of modern computing hardware, it also runs faster and more reliably on the same computers used to run Windows XP. The operating system is more dependable, and Restart Manager reduces the number of times users need to restart their computers. Applications that run on Windows Vista are more reliable too, because applications can recover from

deadlocked situations and improved error reporting enables developers to fix common problems. Windows Vista can even help detect and recover failing hard disks and memory.

Deployment

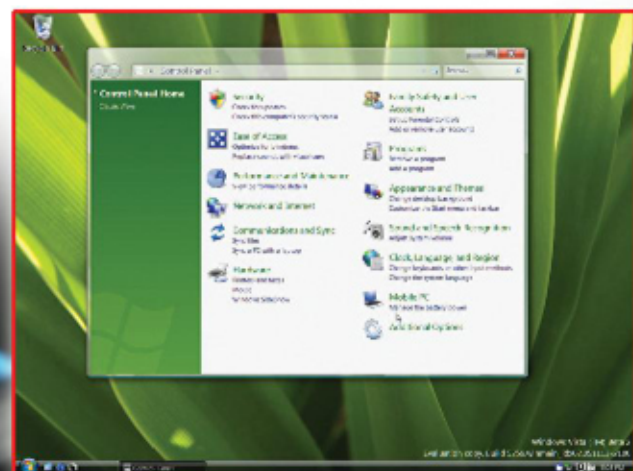

Deploying a new operating system to an enterprise is no small task, but Windows Vista image-based deployment makes the process as efficient as possible. Images are the most reliable and quickest way to deploy an operating system, but they have not historically been part of the standard Windows operating system installation, requiring additional software and many hours of labor to maintain.

Manageability

Monitoring, maintaining, and troubleshooting hundreds or thousands of computers can be both time-consuming and expensive. Windows Vista represents a significant step forward in Microsoft's commitment to reducing Windows computers' total cost of ownership (TCO). Windows Vista is designed to reduce the cost of desktop support, to simplify desktop configuration management, to enable better centralized management of the desktop and to decrease the cost of keeping systems updated.

Productivity

User productivity is still one of the key considerations for IT departments evaluating a new operating system. Windows Vista seeks to add value to enterprises by substantially improving user productivity.

ACT IT - Lounge 2006

Under the auspices of **The Information Technology Industry Development Agency (ITIDA)**, **ACT** hosted the biggest Hospitality Event of the year entitled **ACT IT-Lounge**. **ACT** has incorporated into the Event a wide range of solutions & products to fit all Hospitality needs and focusing on Technologically Empowering the Hospitality Sector.

Since 1998, **ACT** has focused on providing regional and nationwide technology deployment services for the hospitality Sector. **ACT** has had a leading role in providing

this vital sector with state-of-the-art technology that meets with its continuous growth nature.

The day started with a welcoming note from Mr. Mohamed Omran, ITIDA Chairman, who praised **ACT's** efforts towards empowering the Hospitality sector by providing the most updated technologies worldwide.

His speech was followed by **ACT** corporate presentation by Eng. Emad Osman, **ACT** General manager, who started his words by thanking everyone for

participating in the success of this event especially **ACT** IT lounge Sponsors whose collaboration added to the event's success.

By the end of Eng. Emad's speech, he announced the winners of **ACT's** customer satisfaction survey sweepstake who have won an Mp4 each.

ACT has successfully presented the most comprehensive and efficient solutions that meets with the needs of all divisions operating in the hotel.

focusing on

Technologically Empowering the Hospitality Sector

micros FIDELIO

1. MICROS- FIDELIO Property Management System

The event focused on **Fidelio Opera** and **Fidelio Suite 8**

Fidelio OPERA

OPERA is an integrated, web enabled, suite of products designed for the hospitality industry. OPERA includes Property Management, Sales and Catering, Quality Management, OPERAPalm, Central Reservations, Customer Relationship Management, Micros-Fidelio Financials and Materials Management. OPERA is built to meet the needs of any size hotel or hotel chain

Fidelio Suite 8

Fidelio Suite 8 is a system utilising the modern Windows environment, ensuring effective servicing of customers.

The uniqueness of the system lays in its applicability in accommodation institutions with different needs ñ large and small hotels, hotel chains, recreation centres, entertainment institutions etc. The software includes all important aspects of managing a hotel: customer management (incl. sales), catering and conference management, service and financial information etc.

As the platform for Fidelio Suite 8 Oracle software is used, this ensures flexibility and necessary speed of the system. At the same time the growing contents of statistics and history of the accommodation institution are retained

ACT IT - Lounge 2006

2. MATERIAL CONTROL

The Materials Control System is the up-to-date successor to Micros-Fidelio proven solution for the catering and hotel Industry. This software is an instrument aimed at practical and administrative functions found within the F&B area.

Its main function is to supply the users with the necessary information at exactly the point in time at which you require it. In order to support their decisions effectively, this information can be recalled at any point in time or period defined and not only to the end of an Accounting or Inventory Period.

By using this product, it helps to reduce operation costs without significantly increasing workload. Additionally, Fidelio offers further fundamental instruments indispensable to any hotel's operation, such as ordering, receiving, stocktaking, stock controls, recipes, stock depletion and re-ordering.

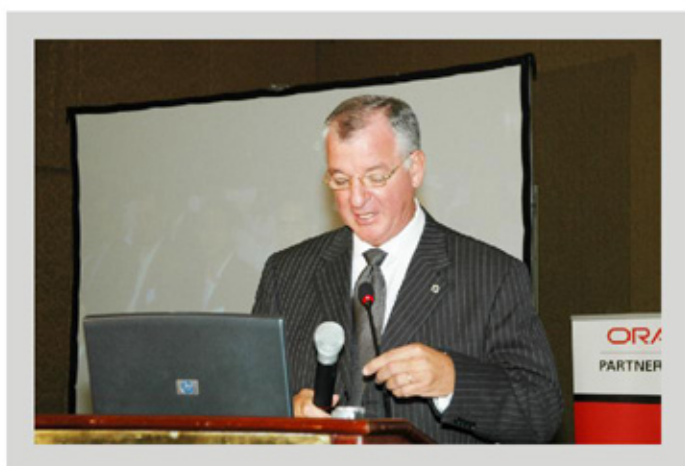

3. TIGER COMMUNICATION

Tiger Communications is a leading global supplier of powerful solutions for voice traffic management, integration and billing in the commercial and hospitality marketplaces. It offers a fully integrated and flexible billing solution utilizing the most appropriate user interfaces.

focusing on

Technologically Empowering the Hospitality Sector

4. ResPAK

ResPAK is Not Just Table Management! Not Just Restaurant Reservations! Not Just Customer Relations Management & Marketing! It is a complete package designed to cater for a wide range of Establishments including - Restaurants, Cafes, Clubs, Hotels, Casinos, Cruise Vessels.

ResPAK assists customers in determining the radius, from which the establishment is attracting patrons. The unique and flexible, marketing, customer relations Management which are provided by ResPAK solutions ensures cost effective restaurants' operations and promotions targeted to specific Patrons.

5. VISION 6

Vision 6 is the latest generation of the Vision product suite. It offers a new level of functionality. Vision 6 solution continues to provide online reporting on demand Vision 6 allows the organization to broaden its Vision reporting to include data from any other key applications by using a pre built or creating a custom reports.

Whether customers need to report or analyze data contained in a third party package, legacy system or in-house developed system, Vision can deliver that power to the business user.

ACT IT - Lounge 2006

IPTV

6. mPhase TV+ System (IPTV)

The mPhase TV+ System enables service providers to deliver high quality entertainment content over their IP infrastructure reliably, securely, and with proven technology. mPhase has taken a different approach in developing a carrier class system in close cooperation with selected partners assuring network providers of a reliable, scalable, high performance, and open solution.

DIGITAL SIGNAGE

7. Digital Signage

Targeting the Sales and Marketing professionals, **ACT** represented a session for Visual digital media that is being used in banking halls, shopping malls, in supermarkets, hardware, stations, airports, doctor and hospital waiting rooms, health and leisure clubs, and in airplanes. Knowing that anywhere there is a captive audience there is an advertising opportunity; new systems are running to cease such opportunities. Such advertising and informational systems are now being referred to as Captive Audience Networks.

focusing on

Technologically Empowering the Hospitality Sector

During the sessions, participants were encouraged to answer product specific questions that would allow them enter a draw by the end of the day. Four winners received **2 Hp Multifunction Printers and 2 Mp4.**

Those winners were:

Ms. Hayat Ibrahim

Mr. Hossam Said

Mr. Hossam Samir

Mr. Hamdy El Toukhy

ACT Awards

At the end of the day, participants were encouraged to fill the Event evaluation form and that would allow them to enter another draw for a HP Notebook and An HP digital camera.

Those winners were:

Mr. Hatem Ramzy

Mr. Ahmed M. Zaheer El Din

Thanks

SENSIBLE SECURITY

ACT

Offers Behavior Recognition Software

In the midst of Security breaches that are becoming a day-to-day threat and take many forms, **ACT** capitalizes on providing you with the specialist assistance that you need in order to maintain a secure setting.

ACT is proud to introduce **Behavior Recognition Software**. This is a software application, which runs on a PC as a stand-alone system or linked to a digital video recorder (DVR) based Closed Circuit Television (CCTV) system. This is to provide artificial intelligence for objects and people tracking, and behavior analysis. The innovative software provides automatic detection, classification, and tracking of people, vehicle and objects in critical infrastructure.

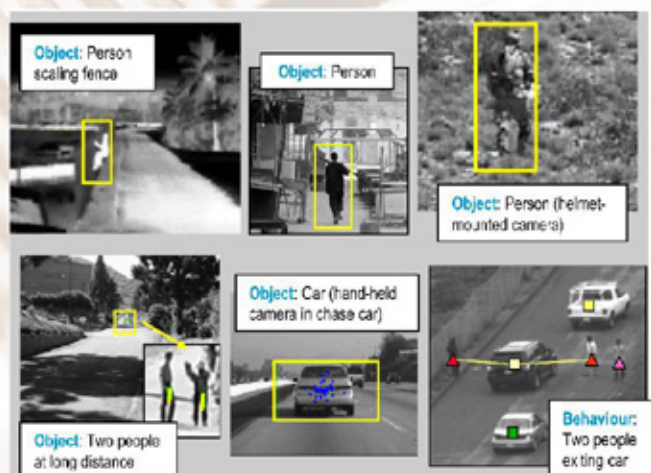

The software is armed with video surveillance to provide world-class video analysis making it a reliable and cost effective tool for security. Whilst detecting suspicious behavior, the software provides immediate alerts for fast & adequate actions.

Behavior recognition software can utilize protection for homeland security, Hotels, Malls, Corporations, Airports, Warehouses, Critical Infrastructures, Traffic management on roadways, Embassies & Consulates, and other Government and Military applications. The solution is the only software available that can simultaneously track more than 20 moving objects (people and vehicles) in each scene and will automatically generate alerts on more than 35 different events, incidents and behaviors. Furthermore, the software will enable the user to define the objects or behaviors that may be encountered as critical to your business.

Effective security precautions require a conscious awareness of one's environment, as well as the need to exercise prudence, judgment and common sense. While the requirements of customers may differ significantly; the requirement for comprehensive, effective security solutions is critical for all. Over the years **ACT** has garnered a reputation for providing our customer base with security solutions while providing support has always been our strength, the need for a comprehensive solution has become more and more apparent.

Reducing human monitoring costs up to 10%, the ingenious solution will enable your business to realize the benefits in cost savings needs to accommodate new technologies.

The software is equipped with fast indexing and retrieval options to retrieve incident video with intuitive queries in seconds or minutes.

ACT specializes in helping clients determine the proper product or combination of products to work best in their environment while providing the customer with the latest high-tech security solutions.

New HP BladeSystem c7000

The new HP BladeSystem c7000 enclosure is the foundation of a new modular computing architecture that simplifies infrastructure, reduces operational cost and delivers IT services more effectively to your business. It consolidates the essential elements of a datacenter - power, cooling, management, connectivity, redundancy, security into a modular, self-tuning unit wrapped with intelligence that is expandable with server, storage and interconnect modules to build a variety of solutions for any business.

Redesigned from the start to deliver a bold agenda for the future of blade computing, it integrates HP unique innovations to tackle the toughest problems facing today's IT infrastructures - cost, time, energy and change. Plus, it includes flexibility, scalability and support for future technologies so it's not only easier to create, change, and manage, but also helps your business take full advantage of new things to come.

The new HP BladeSystem c7000 enclosure supports up to 16 full-featured blades for one of the highest densities in the industry. And, you can mix and match different server blades in the same enclosure. Consolidated and automated, affordable and facility-friendly, modular and virtualized it helps you build a best-run IT infrastructure out of the box.

FEATURES

HP Thermal Logic technology:

Actively monitor and automatically adapt power load and cooling capacity based on changes in demand to save more than 33% on total power costs

HP unique innovations that ensure the highest energy efficiency, redundancy and scalability of power and cooling under any workload and in dense environments

Single- or 3-phase power options and N+N and

N+1 power supply redundancy for maximum power configuration flexibility
All power and cooling components are hot-pluggable for easy upgrades

HP Insight Control management:

Built in HP Onboard Administrator includes a simple LCD screen on the front for rapid setup and daily maintenance and redundant modules in the rear for advanced system administrator operations.

Remote access through 1 link to all iLO 2 controllers built-in to each server

Choice of HP Insight Control software for end-to-end infrastructure control with a built-in automation, wizard-driven interface, and single sign-on role-based security

Delivers system health and performance monitoring, server provisioning and recovery, and vulnerability scanning and patching.

HP Virtual Connect architecture:

8 high-speed interconnect bays support a choice of industry standard interconnect options from your familiar brands and reduces cabling for LAN, SAN and management connectivity by up to 94%. Scaleable 5 Terabit midplane protects your investment with support up to 4 redundant I/O fabrics including 1Gb - 10Gb Ethernet, 4GB Fibre channel, 4x DDR Infiniband support and future I/O connections.

All BladeSystem interconnect options are hot-pluggable and can be installed in pairs for full redundancy.

IDEAL ENVIRONMENTS

Streamline IT operations in large datacenters, remote distributed offices and small server rooms
Consolidated multi-tier application architectures
Industry standard OS and processors support Linux, Windows and HP-UX applications
Large clusters, GRID and utility computing.

ORASCOM Holding Company Deploying CISCO IP Communications (IPC) in NILE CITY

Using **Advanced Computer Technology** expertise, OHC (ORASCOM Holding Company) installed a Cisco IPC solution for stable, scalable network that can grow with the company and help provide excellent customer service.

ACT has successfully delivered, implemented, and tested Cisco IP Communication System & wireless Connectivity in cooperation with ORASCOM HOLDING Company Team at the Nile City Building.

NILE CITY will be the Main Office for ORASCOM Holding Company connecting TABA Heights and GUNA as a preliminary stage, then all other OHD resorts at a second stage.

Connecting NILE CITY with OHD Building, TABA Heights and GOUNA using Voice over IP, was one of **ACT**'s main tasks in this astounding project.

Eliminating traditional PBXs and using the latest state-of-the-art Cisco Technology, **ACT** Implement Call Manager 4.2 with different IP Phones, Routers, Power Over Ethernet switches and Wireless Access Points in that Project.

Now, each employee in ORASCOM Holding Company can utilize his/her time using the unified messaging tool. Internet, Data, Voice and Project announcements, weather, flight browsing, stock exchange, currency, headline news, and more, can also be added on all IP Phones.

With 4-client auto-attendant Module, and other Call Manager facilities, calls are diverted automatically to the required extension, either to reply or even to get a voice mail with silent-busy facility on each IP phone.

Building Single Network to cover both Data & Internet, did simplify the process of implementation, testing and even support using one single point of administration.

At last, a successful collaboration between **ACT** & ORASCOM team implemented one of the latest Next Generation Network (NGN), in one of the latest intelligent buildings in CAIRO.

Overview of

ORACLE® Fusion Middleware

Oracle Fusion Middleware is a unified suite of standards-based middleware components that provides a comprehensive technology foundation- an Application Platform Suits (APS) – and an extensive set of best breed capabilities for solving enterprise IT challenges.

While based on J2EE standards, Oracle Fusion Middleware provides extensive capabilities for effectively bridging Microsoft/.Net based applications with non-Microsoft products and technologies.

Comprehensive, Unified Suite of Middleware

Oracle Fusion Middleware 10g offer the industry's most comprehensive and cohesive platform for service-oriented computing. Oracle Fusion Middleware offers a number of technology solutions based on service-oriented architecture:

- A J2EE-based service-oriented architecture platform to develop, deploys, and manages Web services.
- Enterprise integration services for data integration, business process automation, and business activity monitoring.
- Enterprise portal services to aggregate content and services and to provide users with multi-channel access from wireless devices.

Business intelligence services to query and analyze, perform OLAP, and report on enterprise data Security and identity management services to manage access to systems , to enforce consistent policies, and ensure compliance and auditability.

These solutions share a common grid computing infrastructure, enabling them to be deployed on large numbers of low-cost, modular servers and storage with industry-leading performance, scalability, and availability. They share a common security and identity management infrastructure to unify security administration. And they share a common systems management infrastructure to monitor and manage systems and applications centrally. Oracle Fusion Middleware is designed to be modular, open, and pluggable – even with other vendor's products – so that you use only what you need but get greater value the more you use.

Delivers Value for Enterprise IT

Oracle Fusion Middleware can improve an organization's ability to predict and respond to market dynamics, it can enhance the organization's productivity , and it can radically simplify your information technology environment, while enabling you to exploit your existing investments.

Oracle Fusion Middleware has been the fastest growing middleware suite in the world for the past three years. Today more than 26,600 organizations run their business using Oracle Fusion Middleware. Regardless of your organization's size, the complexity of your IT infrastructure, or the increasing demands of your business, oracle Fusion Middleware can provide an edge in today's competitive business environment.

Our Customers

"Our greatest asset is the customer.
Treat each customer as if they are the only one."

In **ACT** we have commonly held values to guide us in accomplishing our mission. We have identified shared values and guidelines for how we conduct business and how we treat one another.

We value our customers and recognize that we are in the business to serve. We are committed to developing beneficial relationships with our internal and external customers, and believe that active customer involvement in our ongoing improvement efforts is the best philosophy for mutual success.

We believe that leading companies rely on the IT infrastructure they put in place. **ACT** integrated solutions are designed to enable our customers to align their IT needs with their Business Goals. We strive to provide our customers with the right solutions.

We value our customer relationships and believe they are built through honest communication and well-managed expectations.

We value responsiveness to our customers' needs and provide products and services of high quality that meet and exceed our customers' requirements.

Microsoft Worldwide Partner

CONFERENCE 2006

Microsoft has hosted more than 7,000 partners worldwide in Boston during the period from July 11 to July 13 in the "Microsoft Worldwide Partner Conference." **ACT** was present in the conference through Eng. Mohamed Tawfik, Assistant Business Development Manager. The theme of the conference was around driving our business forward fast and profitably.

The conference featured the presence of Microsoft key executives in which they shared Microsoft vision, strategy, and the very latest opportunities around releases, such as Windows Vista, the Microsoft 2007 Office system, and many others. The conference theme was "People-Ready Business", which focused on three main points:

- Customer and Industry Value
- Innovation
- Partner profitability

ACT as one of **Microsoft Gold Certified Partner** specializing in Information Worker Solutions, Advanced Infrastructure Solutions, and Networking Infrastructure Solutions Competencies was present in the conference to meet with other partners and executives of Microsoft. The main focus was on how to continue providing our customers with the right tools, information and opportunity to drive their business forward through Microsoft new wave of products and innovations.

ACT..

builds and operates a Certification Authority

Internet has caused an information revolution around the world. With all the promise of a global information society, tens of millions of Internet users are relying on it for information interchange on a daily basis. We are living in an era where information is being placed at the fingertips of global citizens, empowering and motivating them wherever they are.

Tuesday July 12, 2006 at the Grande Hyatt Hotel, marked a memorable milestone in the ICT sector in Egypt, as ACT has signed an agreement with the Egyptian Chamber of Information Technology (CIT) that stipulate the prerogative to provide licenses for **e-signature services**. This great step inspired a great surge of national pride impressive by any standards. This tremendous achievement will help safeguarding Egyptian IT infrastructure from individuals & groups that threaten its security.

The conference is organized jointly by ITIDA and the CLDP (Commercial Law Development Program) of the US Department of Commerce, under the auspices of H.E. Dr. Tarek Kamel, Minister of Communications and Information Technology, and with the support of the US AID Agency.

The conference was a step towards applying law 15/2004-that was approved & ratified by the people's assemble in April 2004- which regulates the usage of e-signature in Egypt. The law's 30 articles lay the legislative groundwork for the use of e-signatures in civil, financial, and administrative transactions. In doing so, it condones the use of the internet as a legally valid medium for transactions, obviating the need to sign documents physically. The new law also established the information technology industry development agency (ITIDA) as the regulatory authority overseeing the use of e-signature in Egypt. E-Signature is a substitute for handwritten signatures on electronic documents exchanged over computer networks to assure both message integrity and authenticity. A digitally signed text may also be encrypted for protection during transmission

The Egyptian government has taken the initiative to give Egypt further access to a more electronically efficient global community through encouraging the usage of e-signature. Possessing expertise needed to assist the government achieve this initiative, ACT has been officially awarded to build & operate a certification authority that will enable the government to simplify conducting using e-signature. ACT has gained advanced understanding of what is an electronic signature & the technologies related to it.

Realizing how a strong and competitive ICT sector will contribute to increase sustainable economic growth for the Egyptian economy, the Egyptian government has adopted the development of E-commerce as a national priority. E-commerce will be an engine of economic growth in the twenty-first century, with the potential to invigorate economies by enhancing productivity, streamlining distribution, and revamping corporate structures.

Ready to Turn on Revenue Rich Services?

mPhase TV+™ System

The mPhase TV+ System enables service providers to deliver high quality entertainment content over their IP infrastructure reliably, securely, and with proven technology. mPhase has taken a different approach in developing a carrier class system in close cooperation with selected partners assuring network providers of a reliable, scalable, high performance, and open solution.

The mPhase system is an open system that assures system integrity and reliability. It delivers on the promise of carrier class with a modular architecture that enables an engineered design tailored to the service provider and not the software vendor. The subscriber experiences a responsive and engaging user interface.

There are three main key differentiators that differentiate the mPhase TV+ System from any other system:

1) Open System with Reliability

- a. System built on Linux and commercial servers with commercially available Set Top Boxes (STBs) and modems.
- b. System can be configured with different software modules depending upon the customer to satisfy the tradeoff cost, performance and scalability.
- c. STB delivers the user experience through three subsystems:
 - i. TV subsystem: optimized for performance, reliability and consistency.
 - ii. Portal subsystem: allows extension of the TV experience with new applications.
 - iii. Browser subsystem: allows access to a wide variety of services using a wide variety of tools.

2) Pre-Integrated End to End Solution

- a. It works in dizzying array of configurations.

- b. It works seamlessly and consistently.
- c. It works through best in class partners in STBs, modems, processing platforms, content, Video on Demand, Encoding, and Content Authentication.

3) Carrier Class

- a. System has a four tiered architecture for OAM&P Services Management (SMS), Database, Proxy Services, and the STB client.
- b. Each tier can be independently engineered to provide the reliability, service level, and performance required to serve the customer.
- c. Tiers can be combined as well into one server for really small systems or broken apart to serve a widely dispersed subscriber base.
- d. The STB is loaded with application logic and user interface and the supporting data is managed just in time to support whatever the user wishes to do.
